

PUBLIC NOTICE **Works at Six Tunnels**

Talk to your kids about the dangers of swimming at Six Tunnels or in other drainage systems before it's too late.

Drowning is a horrible event but one that is the second most common cause of injury and death. Often drowning deaths and injuries can be prevented.

As part of our commitment to health, safety and the environment, Rio Tinto Alcan is currently undertaking works at the Six Tunnels site (next to the train tracks on Unigan Road). Large boulders will be placed in the area to assist in addressing the sedimentation and erosions impacts from water flow.

***Six Tunnels run
under the road and
railway crossing***

As a result of these works and the dangers associated with swimming in fast flowing drainage waters, we would like to advise the public not to swim at Six Tunnels or other drainage systems. We encourage community members to use the newly opened Weipa pool.

If you have any questions or feedback about Six Tunnels please call the Rio Tinto Alcan feedback hotline 1800 707 633.
